Claims

1.   A system for managing personal information comprising:

a group website tier comprising a plurality of group website objects;

a group tier comprising a plurality of group objects;

a user tier comprising a plurality of user objects;

a first set of relationships that define relationships between the group

website objects and the group objects; and

a second set of relationships that define relationships between the group

objects and the user objects.

2.   The system of claim 1, wherein each of the objects comprises a unique

identifier and a plurality of attributes such that each of the objects may be

uniquely identified from objects on the same tier and objects on different tiers.

3.   The system of claim 2, wherein the first set of relationships comprises:

a first type of relationships that define which group objects have access to

each of the plurality of group websites; and

a second type of relationships that define which group objects appear as

content for each of the plurality of group website objects.

4.   The system of claim 3, wherein the second set of relationships comprises a

third type of relationship that defines which user objects are members of each of

the plurality of group objects.

5.   The system of claim 4, wherein each of the objects comprises an

administrator group object attribute that determines an administrator group

object that has rights to modify relationships and attributes associated with the object.

6.   The system of claim 5, further comprising a profile tier comprising a plurality of profile objects, wherein each of the profile objects comprises:

an associated user object attribute that determines with which user object a profile object is associated;

an administrator group object attribute that determines an administrator group object that has rights to modify relationships and attributes associated with the object, and

a plurality of personal information attributes.

7.   The system of claim 1, further comprising:

a profile tier comprising a plurality of profile objects , wherein each of the profile objects comprises an associated user object attribute, an administrator group object attribute, and a plurality of personal information attributes.
